
{ Responsive Design Exercise. }

Part I

Answer the following questions

- What is an `em`?
- What is the difference between `em` and `rem`?
- What is "mobile first" design?
- What is BEM?

Part II

For this exercise you will be building a small grid system! Your task is to create the following classes:

`.col-4` - consumes 33% of the width when the screen size is greater than 960 pixels, 50% of the width when the screen size is greater than 765 pixels and 100% of the width when the screen size is less than 765 pixels.

`.col-6` - consumes 50% of the width when the screen size is greater than 960 pixels and 100% of the width when the screen size is less than 960 pixels

`.col-12` - consumes 100% of the width when the screen size at all sizes.
